CARD MRI Rizal Bank Leave Management System (LAR-Sys)

Process Architecture Specification — As-Is Workflow Analysis

AS-IS PROCESS (FLAWED)

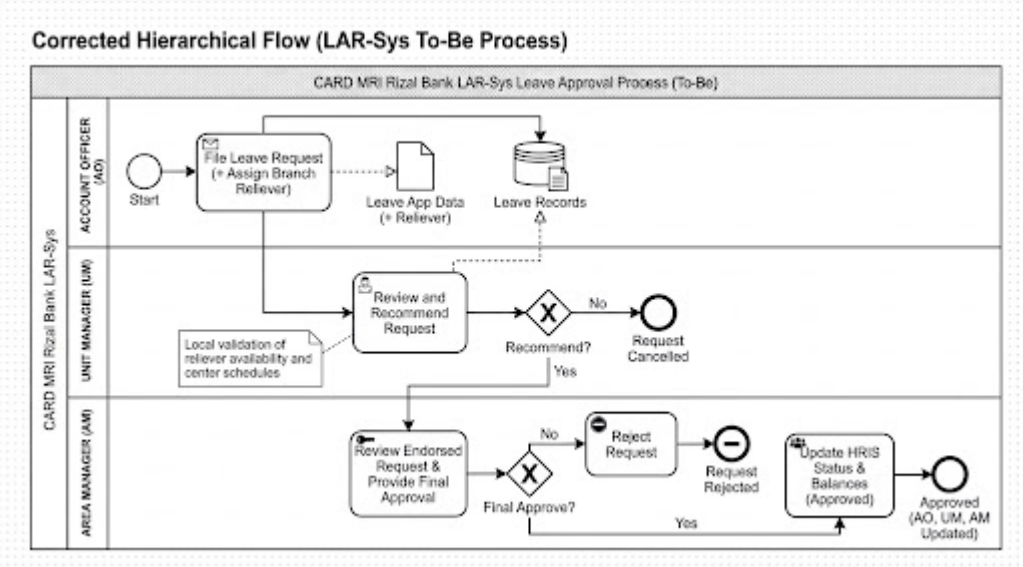

Structural Vulnerability Identified: In the current PeopleCore portal implementation, leave filings by Account Officers bypass immediate Unit Managers entirely, routing directly to Area Managers. This creates a critical lack of operational visibility, leaving field center coverage unverified and causing center scheduling disruptions.

CARD MRI Rizal Bank Leave Management System (LAR-Sys)

Process Architecture Specification — To-Be Sequential Workflow

TO-BE PROCESS (CORRECTED)

Corrected Hierarchical Governance: Enforces a strict 3-role sequential workflow (Account Officer $\rightarrow$ Unit Manager Recommendation $\rightarrow$ Area Manager Final Approval). Requires mandatory branch reliever assignment verified locally by the Unit Manager against center meeting schedules prior to Area Manager sign-off and automated HRIS balance updating.
